

Check if planning to use	Check if Not - Applicable	If neither box is checked explain why SBMP will not be used	Standard Best Management Practice (SBMP)
	X		Revegetate excavated areas and/or areas disrupted by equipment or vehicles as quickly as possible, using native vegetation if possible. Restore as close as possible to original conditions.
	X		Survey on-site buildings and infrastructure to determine material types and approximate quantities that could be reused or recycled and evaluate opportunities for on-site or local re-use and/or recycling.
	X		To the extent feasible, use compact fluorescent lighting (CFL) or LED lighting in all on-site equipment and properly recycle CFLs or LEDs.
	X		To the extent possible, use Energy Star appliances.
	X		Use programmable thermostats to minimize energy use.
	X		Develop a construction waste management plan that establishes a diversion goal, specifies processes for identifying and segregating contaminated and uncontaminated waste, state show/where waste will be reused and/or recycled and safely managed and tracked.
	X		Use biodegradable cleaning products.
	X		Reuse monitoring wells throughout investigations, remediation, and long-term monitoring.
	X		Reuse dedicated materials when performing multiple rounds of sampling of all matrices.
	X		Purchase materials in bulk quantities and packed in reusable/recyclable containers to reduce packaging waste.
	X		Purchase liquids in concentrated form to reduce shipping volumes and frequencies.
X			Purchase equipment and materials locally when available.
	X		Consider local recycling program, requirements and regulations, and incorporate them into Site activities whenever possible.
X			Prepare, store, and distribute documents electronically.
X			Use paper with recycled content and use double-sided printing option when document must be printed.

	X		Include specific focus on green elements at meetings with all parties including clients, stakeholders, regulatory agencies, and consultants. Update project team if goals & responsibilities change.
	X		Integrate schedules to allow for resource sharing and fewer days of field mobilization.
	X		If possible, conduct work during appropriate seasons to reduce weather delays and additional heating/cooling demands.
X			Utilize teleconferences rather than face to face meetings when feasible.
X			Use local staff (including subcontractors) when possible to minimize resource consumption.
X			Maintain vehicles on a regular basis such as tune-ups and proper tire inflation. Use green vehicle maintenance products such as biodegradable lubricants.
	X		Construct and maintain engineering controls such as earth dikes and swales to prevent upgradient surface flow into excavated areas.
	X		To the extent possible, plan for and segregate hazardous waste and non-hazardous waste.
X			Recycle all non-usable/spent equipment/materials following completion of project.
